

NOTES CPH AEGIS

I Microbiome

II Prof. profiles

III pop genetics

IV detail bioinformatics & networks

a DNA } slotgan
eDNA } Kragh

↳ have to use braker

↳ you need

any
DNA you can
get so

use Kmer approach

Qs:

bring up

- greenland paper

- detroit mapping

- difference in US vs Europe publishing

- European stuff Hor wheel playh

Microbiome stuff

community mapping

WRITE
UP NOW

Professor Profiles

Greenland Paper

- 2 myo eDNA

plant / animal / marine /

- large morphs - communicating - are bootstrapping
 → dNA more preserved
 → false good sample bias correction

2 myo

now

↓
heat-
age
eg.?

IDEAS → other module/network

WCGNA to find hub species

instead of thinking of hub genes
 as differential indicators there are
hub species species = gene & site = condition

set-set environment of type / eco markers

Spatial / pseudotime x real time
 (climate time) spatial
hyper folded species

System state change

when did oco systems move to
a "state" where risk/hazard is
greater:

Silicas' spatio temp paper
- as humans become more sedentary
shift toward epidemiologic suscep^l
state

host interface

~~literature mining~~

token $\rightarrow$ DNN

"UM" learning system

~~see~~ cell 2 sentence
